Too much light can fade your fabrics. Too little light can make you feel like you're living in a cave. With stepdown awnings you can say good-bye to window shades that darken a room and block out your view. Now you can cool your home and enjoy the sun-washed landscape. Awnings let the light into your life, *naturally*

Now...A Whole New Color Selection

Your new Aluminum Awnings will be custom built to exacting standards, and are now available in an **entirely new array of contemporary matte finished colors. From Hunter Green to Sierra Clay**, you can now compliment your deck furniture and/or house trim. Today's aluminum awnings are designed to be a "soft" blend in accessory for your home.

The ideal Window Treatment Aluminum Awnings

A Natural Style...A Natural Choice

Step-Down Aluminum Awnings are, by design, stronger than canvas against the elements. Their corrugated structure and sloped shape gives them greater resistance to wind, snow, and rain; protecting you and your house for a long, long time. You will never replace an aluminum awning because it rotted out, and today's finishes are much more resistant to fading and staining than ever before. Aluminum Awnings allow you to control your environment, naturally.

Warmth When You Want It. Cool Shade When You Need It.

You don't have to block out the light entirely during the summer. Because aluminum awnings are angled, they can block the summer sun's rays from directly entering your home. During the winter, when the sun is lower, they let the gentle winter ray's in, bringing you the warmth you want.

A Little Light Saves You A Lot

Because you let in the sun's rays when you want them most - during the winter - you can save on heating costs. During the summer, when you only need a little light, your air conditioner won't have to work as hard. You'll be utilizing natural daylight without the damage from direct ultraviolet rays. Properly placed, aluminum awnings can reduce summer time room temperatures by as much as 15 degrees¹. Aluminum awnings are a smart investment, and will save you a lot of money for a long time.

¹ The National Bureau of Standards and ASHRE, The American Society of Heating, Refrigeration and Air Conditioning Engineers, have both run tests clearly demonstrating that window awnings are an energy saving device for many homeowners.

Canvas vs. Today's Aluminum

Unlike canvas, aluminum awnings are white on the interior, greatly increasing the reflective light into your home. Aluminum awnings won't rot and with proper care will last indefinitely, and our new color selections truly enable you to enhance your home by blending with your exterior color scheme. Aluminum is an environmentally friendly product and a smart investment.
